

VISHAL YADAV

Amethi, Uttar Pradesh, India | +91-9336191749 | vishalyadav.95055@gmail.com
linkedin.com/in/vishal-yadav-b8a171335 | github.com/vishalcse001

PROFESSIONAL SUMMARY

Motivated and detail-oriented B.Tech graduate specializing in Software Engineering and Full-Stack Development. Proficient in Python, C, and the MERN stack, with hands-on experience building scalable web applications and AI-driven projects. Strong foundation in Data Structures and Algorithms (DSA) and currently expanding expertise in Artificial Intelligence and Machine Learning. Eager to contribute technical skills to an innovative engineering team.

EDUCATION

Rajarshi Rananjya Sinh Institute Of Management And Technology

Amethi, UP

Bachelor of Technology (B.Tech) in Computer Science & Engineering | Graduate

TECHNICAL SKILLS

Languages: Python, C, JavaScript (ES6+)

Web Development: MERN Stack (MongoDB, Express.js, React.js, Node.js)

Data Structures: DSA with Python

Tools & Platforms: Git, GitHub, Basic Excel

Specializations: AI/ML Concepts (In Progress), SEO (Search Engine Optimization)

Soft Skills: Problem-Solving, Team Collaboration, Analytical Thinking, Adaptability

PROJECTS

Sigma GPT — *OpenAI API Integration*

- Developed a custom conversational AI web application leveraging the OpenAI API and Node.js backend.
- Implemented a clean, responsive frontend user interface using React.js to ensure seamless user interaction.
- Managed API routing, secure request handling, and error logging on the server side.

Video Conferencing Web Application — *MERN Stack*

- Built a real-time, multi-user video conferencing platform using React.js, Node.js, and Express.js.
- Integrated WebRTC protocols to enable peer-to-peer audio and video streaming with minimal latency.
- Utilized Socket.io for robust, real-time signaling and chat functionality during active sessions.

Neural Style Transfer (NST) — *Artificial Intelligence / Deep Learning*

- Implemented a Neural Style Transfer algorithm using Python and Deep Learning frameworks (TensorFlow/PyTorch).
- Blended the artistic style of a reference image with the content of another target image using Convolutional Neural Networks (CNNs).
- Optimized content and style loss functions to generate high-quality visual outputs.

Version Control System (VCS) — *Core Systems & Python*

- Designed and built a command-line Version Control System from scratch using Python to understand low-level data management.
- Implemented core functionalities mimicking Git, including snapshot tracking, hashing algorithms for file integrity, and commit history management.
- Enhanced understanding of file systems, data structures, and local repository tracking.

CERTIFICATIONS & LEARNINGS

- Data Structures and Algorithms (DSA) in Python** – Conceptualized and solved complex algorithmic problems.

- **Artificial Intelligence & Machine Learning** – (In Progress) Deepening knowledge in data preprocessing, model training, and neural networks.
- **Search Engine Optimization (SEO) Fundamentals** – Learned techniques to improve web application visibility and search rankings.
